

FOR IMMEDIATE RELEASE

VSO Software announces the release of PhotoDVD 4, a complete new version of its award-winning DVD slideshow software.

TOULOUSE, France (June 15th, 2010) – PhotoDVD version 4 now includes a new output format, new transitions as well as a very innovative live preview player. This easy to use software, in a 1-2-3 step process, allows users to create a customized video of pictures, with music, text, transitions and a DVD-like menu with chapters.

With PhotoDVD 4, the outcome is no longer limited to burning to DVD, the new output to mpeg4 now allows videos to be transferred to  Youtube or Dailymotion in High Definition format. The software will automatically split videos over 10 minutes long into a “YouTube-ready format” in HD 1920 x 1080.

Version 4 also allows for even faster customization:

“With the new fast preview you just can’t go wrong. The innovation is that you can see and edit your slideshow live, while playing the preview. Check all your settings, synchronize video and music and make changes until you’re totally satisfied with the result before burning.” explains Cedric Van-Dendaele, PhotoDVD developer at VSO Software.

With new options and design, this version has little to do with its predecessor: a new, extensive range of transitions have been added to give a professional touch to the mini-movies created.

PhotoDVD 4 can be downloaded here: <http://www.vso-software.fr/download.php>
The free trial includes a watermark in the video file created.
The full version costs 29.99\$.

About the company

VSO Software is an innovative company located in France (Toulouse). While it started out specializing in burning applications, the company has now established itself as a multimedia software editor recognized worldwide. VSO Software is dedicated to producing high quality software with easy to use programs for users of all levels.

Contact
